DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 3 and 4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sharma et al. (US Patent Number 6,647,469 hereinafter "Sharma") in view of Cowger et al. (US Patent Number 6,314,477).

3. As per claim 3, Sharma teaches a distributed multiprocessing computer system (figure 1), comprising: a plurality of processors (element 125, figure 1) each coupled to an I/O bridge; a plurality of memory modules coupled one each to the plurality of processors (DIMMS, element 135, figure 1), each memory module able to store data blocks that are shared between said processors, wherein coherence of the shared data blocks is maintained using a directory based coherence protocol (memory configured to support a directory based coherency scheme, column 7, lines 1 – 3); at least one I/O device coupled to the I/O bridge, the I/O device and I/O bridge adapted to perform a direct memory access (DMA) to transfer data blocks to the memory modules (I/O device, column 6, lines 45 – 58); and wherein the I/O bridge obtains exclusive ownership of shared memory module data blocks during I/O device access (column 6,

lines 59 – 65) and wherein said I/O bridge includes a DMA device configured to perform both DMA reads and writes on streams of data blocks (column 7, lines 65 – 67, column 8, lines 1 – 9).

However, Sharma does not explicitly disclose the out-of-order structure.

Cowger teaches DMA access in which data is configured to both in-order and out-of-order data handling on streams (column 35, lines 54 – 67).

It would have been obvious of one of ordinary skill in the art to recognize that Sharma teaches has the DMA structure to support an in-order and out-of-order read/write and modify it with the implementation as seen in Cowger above. One of ordinary skill would be motivated to make such modification in order to implement quick and efficient reassembling of data (column 2, lines 1 – 11).

4. As per claim 4, Sharma teaches a distributed multiprocessing computer system wherein the DMA device that performs an in-order stream of reads of data blocks always receives coherent data blocks that do not have to be written back to the memory module (figure 5, column 9, lines 30 – 67).

Response to Arguments

5. Applicant's arguments with respect to claims 3 and 4 have been considered but are moot in view of the new ground(s) of rejection.

6. The Examiner also notes that the newly cited rejection includes appropriate handling of both in-order and out-of-order data processing.

Conclusion

7. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
